

Full Stack JavaScript Engineer Application

I am excited to apply for the Full stack JavaScript Engineer position at Sambla Group, drawn to your commitment to improving people's finances through innovative technology and your people-centered company culture.

Key Highlights of My Background

With 3+ years developing user-centric web applications at CostBits, I delivered a comprehensive analytics solution using React, TypeScript, and Tailwind CSS. By integrating frontend systems with RESTful APIs, I optimized UI load times by 60% and improved user satisfaction scores by 20%. My recent hobby project includes developing a Job Board App from scratch with React/TypeScript frontend (Vite) and Node.js/Express backend. I bring strong communication and teamwork abilities, experience with agile methodologies, and knowledge of cloud computing platforms (AWS). My active contributions to open-source projects on GitHub demonstrate my commitment to high-quality code and continuous learning.

How I Can Add Value to Sambla

I can build the new, commercially valuable product that will manage high traffic volumes, leveraging my experience optimizing application performance and scalability. My strong Node.js expertise, proficiency in TypeScript, and familiarity with modern JavaScript frameworks align perfectly with your technical requirements. My financial industry experience at CostBits has given me insights that will be valuable as Sambla works to help individuals improve their finances. I'm eager to join your team-oriented culture and contribute to your goal of becoming the largest loan broker in the Nordics.

I look forward to the prospect of discussing how I can help Sambla Group achieve its ambitious goals. I am confident that my unique combination of technical skills, financial knowledge, and a passion for continuous learning will allow me to make meaningful contributions to your team. I look forward to the prospect of discussing how I can help Sambla Group achieve its ambitious goals.

Best regards,

Remya
